

sacred space is a state of mind

when we look inside ourselves

when we have a moment of human contact

when we are imbued with purpose

sacred space is a celebration of life

a moment of realization

a collective experience

where a symbol can transform a place

sacred space may engage us for particular moments

where man embraces nature

where the man made and the natural are one

where action is celebrated

where architecture anticipates action

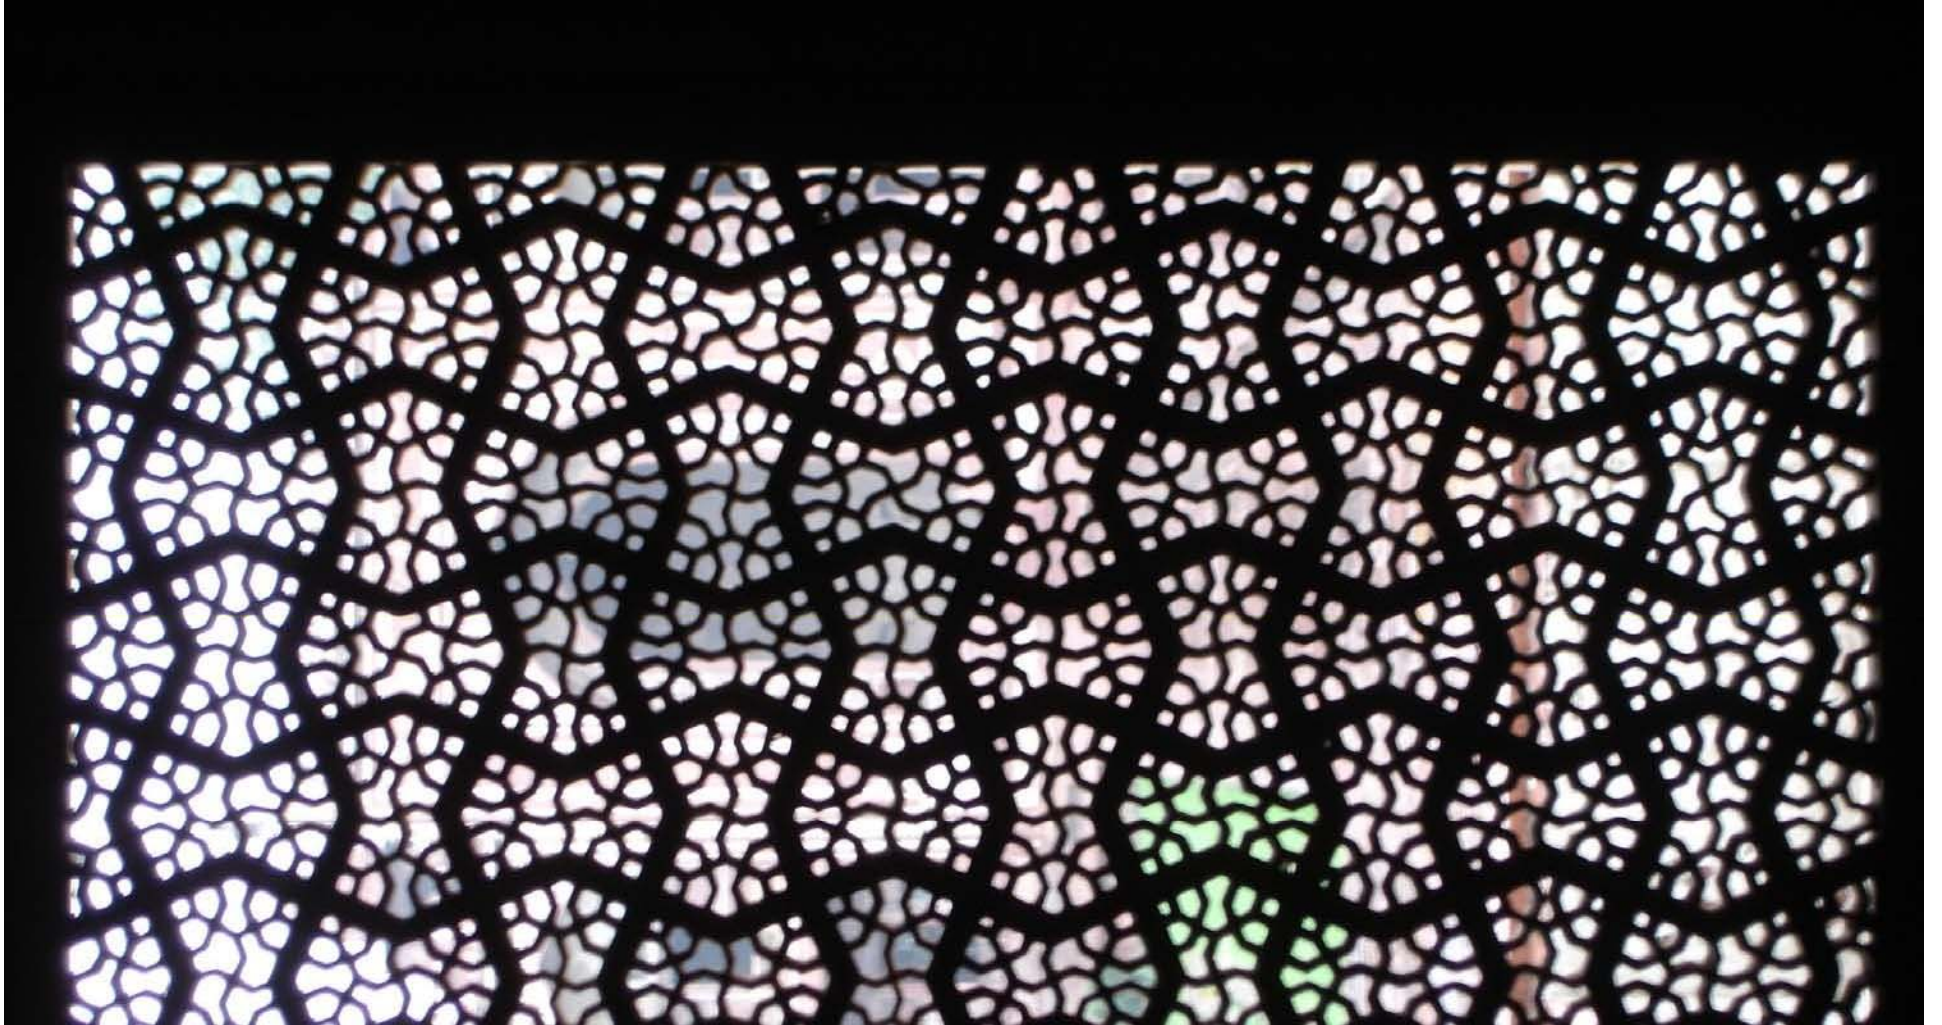

where we make a space for the unknown

where we give access to the sublime

where we filter our view of the world

where a repeated occurrence is manifest

where we are awed by our own industry

where we seek comfort through our industry

where awe turns our inner spirit
